

## **VETTED WHITEPAPER DRAFT**

### VETTED VISION:

Welcome to VETTED, created and managed by VETTED LLC. The general purpose and identity of our brand is to lead cutting edge advancements in the field of post AI (Artificial Intelligence) authentication services. We look to establish an early leadership role in tech creation and social movement towards prioritizing authentication of users, and content, to discern real authentic human creation as compared to digital or artificially manufactured outputs. We believe that this fight is just entering its beginning stages of importance, but will be extremely relevant henceforth.

While our goals fall heavily into the serious space of user authentication and validation, VETTED brand also wants to push the envelope on mobile tech wearables, fashion, cryptocurrency awareness, growth, and understanding, as well as upgrading passive income generation routes, and revamping/rethinking cryptocurrency mining functionality and capabilities.

### VETTED CONCEPTS:

VETTED, launching in Q2 2026, has designed multiple products to instantly begin executing its vision upon release. Our early projects are focused on physical devices as well as external web-based displays. Our users will begin by submitting a verified personal identification questionnaire. This questionnaire will establish a base identity for the user, and link all social media networks that they wish to receive the VETTED E-SIGIL badge. This VETTED badge, will apply to the specific user and all video content creations that they do not specifically deem as AI generated. There will be two options for users to qualify for and maintain their VETTED authentication badge. The first method will be to purchase a physical device (aka the SIGIL), after approval of verified personal identification document submittals. Most physical devices, specifically the FOUNDERS EDITION, will provide a lifetime VETTED E-SIGIL approval to the user with no monthly or annual fee. The physical devices consist of a wearable form factor that the user should display in majority of future video creations. By the user displaying the physical device in said content, they will cultivate trust in both their own content creation, as well as community wide trust in the VETTED brand in its entirety. A secondary option will function similar to the physical device, in the fact that it is also displaying a proprietary “code”

upon a physical device. But, this service will be a web-based service that can be utilized by current physical hardware that a consumer may already own, such as a tablet, cellular device, tablet, or gaming handheld. To utilize our service on devices that are not created by VETTED, each user will pay a monthly subscription fee (tiered options available) to allow the device to access and display web based “codes” and also obtain their certified VETTED E-SIGIL user badge.

#### VETTED PROPRIETARY SOFTWARE DISPLAY:

VETTED devices will utilize proprietary “in-house” designed technology to display a combination cryptographic hash function “simultaneously” across all devices in the VETTED network. This hash function and algorithm will utilize a combination hash output from multiple blockchains, as well as the VETTED proprietary numbering system combined with a randomized VETTED specific hashing function. The primary blockchains to be utilized in our hash compilation process will be the official BTC (Bitcoin) SHA-256 blockchain (updated every ~10 minutes upon individual block reward), and our own cryptocurrency hash from the VETTED coin, based on the X11 blockchain infrastructure (updated in one-minute intervals coinciding with our blockchain reward structure). Inherently, the X11, specifically DASH version 20.0.1 blockchain fork, where VETTED token will be created, is based from a system that utilizes 11 different algorithms inherent in its current generation of hash output and coinciding block reward. After taking into account both the current BTC SHA-256 block reward hash, and the VETTED token X11 block reward hash, our system will compile that data and combine it with our internal, off-chain proprietary hash, and will then create a new proprietary compilation hash (COMPHASH), that will then be broadcast to the VETTED network to be displayed on all devices. This compilation hash will be updated at an interval to be designated after VETTED beta testing is complete (10 to 30 second approximate value).

Because Artificial Intelligence cannot predict the future, we will hold the one key advantage in discriminating between reality and artificially designed content.

#### VETTED DEVICE ALTERNATIVE FUNCTIONS AND EARNING:

Beyond serving its primary purpose of user and content authentication, the VETTED physical devices will provide multiple bonus functions, that could each technically outweigh its

primary function. The VETTED devices, nicknamed, the SIGIL, will also provide the service of BTC solo lottery mining. Albeit only having a small chance, each of the SIGIL'S will be acting as BTC solo mining lottery miners that have a chance of solving a BTC hash and earning an official BTC block reward (currently 3.125 BTC).

Also, to reward the users for being part of our system and expanding our brand, our SIGIL devices will also be solo-mining our VETTED coin. The rates will vary based on device edition, and VETTED subscription tier, with the physical FOUNDERS EDITIONS of our devices mining approximately one full VETTED token every two minutes that it is online and connected to our network.

There will be future bonus multiplier rewards to be tied to VETTED token mining for on-chain users completing various objectives, goals, and/or promotions!

#### VETTED STRIKE POLICY:

Upon approval, and continued effort in upholding of VETTED user guidelines, each VETTED user will receive their official VETTED E-SIGIL badge (future display techniques and integrations to be upgraded over time). The VETTED brand offers a two-strike policy in regards to user non-compliance with VETTED standards, guidelines, and policies. If a VETTED user, with a VETTED E-SIGIL badge, (or any non-VETTED USER) attempts to circumvent our systems to create faulty or misleading artificial content, to portray the content as authentic/real, and in doing so, undermine our brand goals, will receive their first strike. If the user is ever found in violation of brand standards again in the future, said user will receive their second strike and forego all service promises (mining, promotion, system functionality, watermarks, badging, brand ties, etc.) as outlined in our whitepaper and contractual documents that has been agreed upon between the brand and the consumer. They will forego a non-reversible entirety account/user ban. This ban will include any past or future accounts or content associated with the specific user, their IP address, and their social media accounts. Their devices will be rendered useless and banned from our network. All rewards previously earned, and or future projected rewards, will be disqualified and considered null. VETTED STRIKE POLICY and user account strike tally will be managed directly by the VETTED MANAGEMENT team at its sole discretion.

#### VETTED LIBRARY:

Another exciting functionality that the VETTED brand will be looking to expand upon in the future is the VETTED LIBRARY. Our library will include a sortable, interactable ledger of all content and/or users in the VETTED network. The LIBRARY will be a sortable conglomeration of all VETTED users which will in turn offer massive networking and promotional capabilities. VETTED LIBRARY ideas and advancements will be updated in future whitepaper revisions.

#### VETTED MANAGEMENT TEAM:

The vetted team upon onset consists of three primary parties.

1. Tyler Farrington, owner, creator, and CEO of both the VETTED brand and VETTED LLC.
2. David Tarver, pro bono contractor to the VETTED brand. David is the owner/creator of Vulcan-Computing LLC. He is the lead programmer for the VETTED brand. In regards, to ownership of the company, David has foregone ownership and chosen instead to receive future royalties based on all device sales, subscription sales, merchandise, and all future sales/products associated with the VETTED brand and its future partnerships. Also, David will receive special considerations as outlined in the VETTED token TOKENOMICS section of the whitepaper.
3. Brady Farrington, brother of Tyler Farrington, will inherit all business ownership and acting command of both the VETTED brand and VETTED LLC in the circumstance of incapacitation of Tyler Farrington.

#### VETTED EXECUTION ROADMAP:

Q1 2026:

VETTED socials release. (done) [VETTEDXI]

VETTED website online. (done) [VETTEDXI.COM]

VETTED preorder availability.

Q2 2026:

VETTED token release on an X11 blockchain infrastructure.

First VETTED MASTER NODES and EVO NODES online.

VETTED SIGIL first edition and FOUNDERS EDITION releases.

VETTED web wallet, WEBMINER/WEBAPP display, and tiered subscription release.

VETTED E-SIGIL support online.

VETTED LIBRARY release.

Q3 2026:

VETTED WATCH release.

VETTED HEADBAND release.

Q4 2026:

VETTED GLASSES release.

#### DISCLAIMERS AND REGULATIONS:

There is no guarantee of profit from investing in this project, this is purely a passion-driven effort that we hope will get people excited towards our movement and brand. \$VETTED value will primarily be driven by market demand and speculation, as is with every other non-security investment. \$VETTED will have limited use case and functionality. The \$VETTED coin, representing the VETTED brand is not classified as a security, and offers no protection under federal securities laws.
